The "CLEVER"™ Car

I first saw this on "Future Cars." It gets my attention at several levels, like 2D fast maneuvering, great gas mileage, looks like a 2 seat fighter (that's the "pure" F/A-18 pilots). More info [here](#), [here](#), and [here](#), with the project main page being [here](#). Using compressed natural gas, you'd be getting some serious distance for your energy dollar. The main site has some great cutaways of the frame structure, the steering and tilting systems, and other info!
