Valour-IT Project Challenge: Enter the Navy

Description

Well, it looks like us squids have been caught out at sea in receive EMCON â€œA.â€•

No one had volunteered to lead the Navy effort to raise money for the Valour-IT project, which provides computers and software to our injured warriors (of all branches), so they can function by using voice activated technology. Itâ€™s a quality of life issue, let alone serious morale issue.

We have used technology to hunt down and destroy our enemies on the land, sea (on and under), and air. Itâ€™s time we use that same advancement of science and technology to give the wounded a fighting chance to be normal, despite the physical disabilities.

The donations go thru Soldierâ€™s Angels, which is a 503(c) organization. That group has done many more things than this for our service members. Scan Hollyâ€™s site and see how you can help with other things she is workin on, too.

The Army, Air Force and Marines are already moving out and weâ€™re looking pretty lame. Does it remind you of that feeling when you missed the last Liberty Boat back to the ship? Yep, lameâ€¦.

Someone may have beat me too the duty to handle this, but if not, Iâ€™m on itâ€¦.

Update: Get over to The Indepundit (LCDR Smashâ€™s blog), where his wife is leading the charge for the Navy team.

Pass the word.
