Sometimes Being on the Bleeding Edge Requires Riskâ€¦.

Description

Before you begin busting on Apple, they have been responsible for bringing more innovation to our desktop since the Steve^2 team of Jobs and Wozniak did their thing in a garage and made the Apple I.

Yep, they have a recall on exploding batteries, but thatâ€™s not the first battery in history to do that. Ask some of the other laptop manufacturers.

So, MacBook users, get out your kevlar lap blanket, or don your FFE, but most importantlyâ€¦heed the recall.

You die hard PC users who can tell me how bad Macs are, when you have never touched one in your life, keep it for your PC friends and send a thank you note to Apple for the Windows OS you are using to view this post.
