WordPress Automatic Update Pluginâ€¦Painless!

Description

In case you didnâ€™t catch the announcement last month on your WP Dashboard, the WPAU plugin is out.

Took me about 2 minutes to move from 2.2.1 to 2.2.2 (out today to fix some security issues). That sure is a lot less than the all morning long sessions I have had before coming to the 2.X then 2.1.X and finally the 2.2.1 version, making sure I didnâ€™t lose anything.
Besides having to download two generated backup files, there was one plugin that didnâ€™t reactivate in the process, so I did it manually.

Highly recommended!

Update 8/08/2007:Ã, I found two other plugins I had activated that didnâ€™t come back on using the automatic update.Ã, Recommendation:Ã, Scan your plugin list for ones not coming back on.
