Next Rating Merger: GMs and EMs

Description

Today in Naval History: We fired a rail gun at Dahlgren.

Cool! Shove a piece of metal at a target at Mach 5 to 7. Forget about having to handle hazardous explosives, just route some juice to the rails and send some good old, time tested â€œF=M*Aâ€• at the bad guys for effect. Can you say â€œ10.8 megajoules ON THE WAY!â€•

The Military Times video, with CNOâ€™s remarks is here.
