From the Desk of Col George Dodenhoff, USMC â€“ Part 4

Description

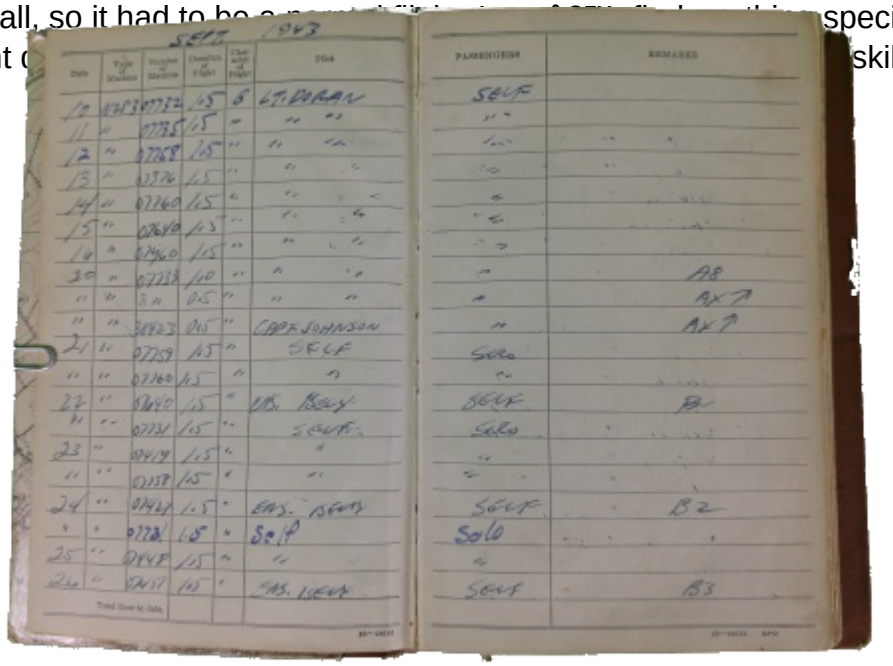

MEMORANDUM
FROM THE DESK OF
GEORGE H DODENHOFF
COLONEL OF MARINES

Subtitle: First Solo

On September 21st, 1943, the Colonel took to the skies by himself. A critical step in the process of learning to fly anywhere, he did so with a total of 12 recorded dual control fight time. He would have been sitting in the aft seat of the N2S-3 BuNo 07759. As a point of reference by todayâ€™s training, a civilian private pilotâ€™s license first solo flight doesnâ€™t have a set number of hours to have, but it is at the discretion of the flight instructor to allow the first individual journey into the sky. I would assume (not being an aviator), similar in the military training realm.

default watermark

He was aloft for 1.5 hours over NAS Corpus Christi (again an assumption on the location). with no notes at all, so it had to be a [illegible] specific regarding the syllabus for a solo flight [illegible] skills to be practiced.

Hereâ€™s some more historical video regarding Navy flight training, but not specific to the first solo flight.
